Mi Workspace Dashboard

We understand the importance of data-driven decision making for facilities and estate management, particularly today with the pressures of safe occupancy and new health and safety compliance, along with the changes relating to remote and flexible working that are transforming the workplace.

Business Intelligence dashboards provide analytics relating to meeting room and desk booking, space occupancy vs capacity, environmental dashboard, sensor analytics and audio-visual equipment status and performance metrics.

Digitised 2D & 3D Floor Plans

Resources can be assigned/removed as required to help manage the facilities and office workers. Mi Workspace is also able to support with the management of social distancing, allowing the distance to be set from 0 – 3m which will then reflect the capacity on each floor. The system also runs a Contact Tracing report.

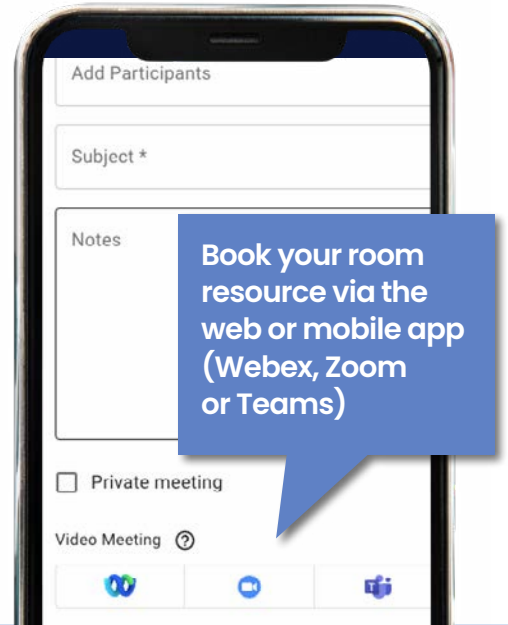

Uploading a floor map allows user to visually see the floor in 2D and 3D and actively book resources from the 2D view. Visibility of colleagues who have already booked and where they are located helps with collaboration and maximising productivity in the office.

Useful Mobile App

The mobile iOS and Android apps provide a native user experience allowing you to quickly book room, desk or resource via chat, voice, or floor map. The map view allows users to understand availability and book a room or desk in the location on the floor or building they desire. The user interface for web and apps has been designed to mirror each platform thus giving continuity to the user.

Part Of The Mi Services Offering

Mi Workspace is the latest addition to the Mi Services offering. Mi Services is an added value offering available from the entire Global Midwich Group, this includes Mi Support, Mi Hardware as a Service and Mi Insight.

Mi Support offers customers enhanced product assurance with access to a 24 hour helpdesk, warranty, training and services.

Mi Hardware as a Service pairs the latest hardware rental and Midwich Group added value services with a monthly affordable price. Kit your customers out with the latest technology, flexible upgrade options and next-day solution replacement guarantee.

Mi Insight puts your AV estate into context with full visibility of your assets and how they are operating with the additional benefit of workflow automations that act on errors as they happen in real-time through automation. We call this technology AIOps.
